

Si ATM AB – Company profile

Your number one provider of air traffic management systems

TAKING OFF

Si ATM is an Air Traffic Management system specialist and supplier. Founded in 1981, we participated in the development of innovative ATC systems in Sweden and Russia in the 1980s and were the first in Europe to implement an operational MTC system. Today we offer mature ATM products for the global market which support ATC operations, training facilities, traffic optimisation and process modernisation.

CRUISING HIGH

Si ATM stands on the international forefront of ATM products. Today we are always among the first companies of our kind to implement new recommendations and embrace new industry insights. This is because we can easily adapt, while our products are highly modular. Our team of specialists, who have extensive experience and expertise in the areas of Air Traffic Control and computer science, can deliver turnkey solutions to any challenge.

DISTINGUISHED BUSINESS MODEL

The Si ATM business model is what distinguishes us from our competitors. We offer exceptional service and high-quality ATM products, together with reasonable pricing and life-cycle costs. We want customers to experience our dedication to meeting project deadlines, while our direct contact approach makes communication effective and efficient. Our aim is to build long-term relationships based on the highest levels of customer satisfaction.

MISSION

Using our well-proven methodology and extensive know-how, we deliver cost-effective ATM products through low-risk development and implementation while ensuring customer expectations are met. Rather than offering generic products, we deliver bespoke systems which meet the individual customer's unique requirements.

WORK SMARTER WITH US

Invest in a modern, nationwide and future-proof ATM system, which is proven and reliable. Our solutions make use of sophisticated processes which enhance your operational safety, efficiency and security. Our products' functionalities comply with ICAO, SESAR and Eurocontrol requirements. They are designed for airspace and traffic volumes of any size by means of distributed processing within a modern framework.

SESAR STRATEGY COMPLIANCE

In line with Single European Sky (SES) legislative framework 2018/1139, 2017/373, 550/2004, 716/2014 and 409/2013, to prepare European ATM system for network operations, Si ATM has achieved compliance with the SESAR functionality of the Pilot Common Project (PCP).

ACROSS THE GLOBE
